 DESCRIPTORS Communication Skills; *Data Processing; *Data Processing Occupations; *Job Analysis; Knowledge Level; *Occupational Information; Safety; Skill Analysis; Skill Development; *Task Analysis; Task Performance; Work Attitudes

ABSTRACT

The general purpose of the occupational analysis is to provide workable, basic information dealing with the many and varied duties performed in the data processing occupation. The report has limited its discussion to entry level positions that are open to qualified high school graduates. The document opens with a brief introduction followed by a job description. The bulk of the document is presented in table form. Five duties are broken down into a number of tasks and for each task a two-page table is presented, showing on the first page: tools, equipment, materials, objects acted upon; performance knowledge (related also to decisions, cues and errors); safety--hazard; and on the second page: science; math--number systems; and communications (performance modes, examples, and skills and concepts). The duties listed are: preparing data entry information, operating computer, supervising programing, maintaining a systems library, and performing basic business applications for processing data. (BP)

 * Documents acquired by ERIC include many informal unpublished *
 * materials not available from other sources. ERIC makes every effort *
 * to obtain the best copy available. nevertheless, items of marginal *
 * reproducibility are often encountered and this affects the quality *
 * of the microfiche and hardcopy reproductions ERIC makes available *
 * via the ERIC Document Production Service (EDRS). EDRS is not *
 * responsible for the quality of the original document. Reproductions *
 * supplied by EDRS are the best that can be made from the original. *

E Performing Basic Business Applications for Processing Data.	77

FOREWORD

The occupational analysis project was conducted by The Instructional Materials Laboratory, Trade and Industrial Education, The Ohio State University in conjunction with the State Department of Education, Division of Vocational Education pursuant to a grant from the U.S. Office of Education.

The Occupational Analysis project was proposed and conducted to train vocational educators in the techniques of making a comprehensive occupational analysis. Instructors were selected from Agriculture, Business, Distributive, Home Economics and Trade and Industrial Education to gain experience in developing analysis documents for sixty-one different occupations. Representatives from Business, Industry, Medicine, and Education were involved with the vocational instructors in conducting the analysis process.

The project was conducted in three phases. Phase one involved the planning and development of the project strategies. The analysis process was based on sound principles of learning and behavior. Phase two was the identification, selection and orientation of all participants. The training and workshop sessions constituted the third phase. Two-week workshops were held during which teams of vocational instructors conducted an analysis of the occupations in which they had employment experience. The instructors were assisted by both occupational consultants and subject matter specialists.

The project resulted in producing one hundred two trained vocational instructors capable of conducting and assisting in a comprehensive analysis of various occupations. Occupational analysis data were generated for sixty-one occupations. The analysis included a statement of the various tasks performed in each occupation. For each task the following items were identified: tools and equipment; procedural knowledge; safety knowledge; concepts and skills of mathematics, science and communication needed for successful performance in the occupation. The analysis data provided a basis for generating instructional materials, course outlines, student performance objectives, criterion measures as well as identifying specific supporting skills and knowledge in the academic subject areas.

PREFACE

Broadly defined, data processing encompasses people and many of their activities. Any individual today could refer to data processing as a major segment of "life." Processing data today has become an important function of the struggle to explore, invent, predict, analyze, organize and classify. To fulfill needs, men and women have introduced data processing into a multitude of different occupational areas. One has only to read the daily newspaper to recognize some of these areas: crime prevention, aerospace exploration, construction of highways, buildings, and entire cities. Within these broad areas the data processing student will find a wide range of specialized fields in which to concentrate.

Data processing is a rapidly changing field, and training institutions should keep up with the most recent technical developments in order to update equipment and methods of instruction. Schools can introduce the basic concepts and prepare students for entry level positions.

Presently in the data processing field there is a basic breakdown of three job levels. The first level would be filled by graduates of a vocational high school program. The second level would be made up of people with a two-year college background or five years work experience. The supervisory level would be the last level made up of people with a four-year college degree and two to five years experience, or ten years work experience and no college. In industry there is an overlapping between levels depending on the size of the data processing department.

In this report the writers have limited discussion to entry level positions of business data processing; those positions open to qualified high school graduates. Research found these positions to be unduly limited. Because some firms refuse to hire high school graduates in data processing it is believed there is a need to inform possible employers of the intensive training being offered and of the capabilities and potentialities of vocational graduates. Conversely, it is also believed that more high school students should be made aware of the highly favorable job market in business data processing and of their school's innovative training facilities available for their use.

ACKNOWLEDGMENT

We wish to acknowledge the valuable assistance rendered by the following subject matter specialists. They provided input to the vocational instructors in identifying related skills and concepts of each respective subject matter area and served as training assistants in the analysis process during the two-week workshops.

Rollin M. Barber, Psychology

JOB DESCRIPTION

The jobs available in data processing are numerous and involve varying degrees of education and training. The console operator operates a computer system (including entry of variable data through the console keyboard, initialization and loading of programs), monitors the program during execution and records equipment utilization figures.

The systems data librarian is a person responsible for all of a system's records, files, discs, and tapes. That person organizes and categorizes for speedy reference, and is responsible for strict security of library data. He/she also maintains a schedule for users of data, establishes priorities for its use, and coordinates users reservations and requests. Maintaining a current library record file of computer log time, and making frequent evaluations and recommendations to managers and supervisor concludes his/her duties.

The junior systems manager, under direct supervision, assists higher level classifications in devising computer system specifications and records layouts. This person is usually fairly competent to work on several phases of systems analysis with only general directions, but still needs some instruction and guidance for the other phases.

A supervisor of computer operations controls the operation of the computer and peripheral data processing equipment. He/she is considered as being in charge of all activities of computer operations. Tasks in this job also include establishing detailed schedules for the utilization of the computer to obtain maximum usage and the best results, assigning personnel to the various operations and instructing them when necessary, and reviewing equipment logs and reports to the manager of data processing on the equipment operations efficiency.

The senior computer operator, under general supervision of the manager of computer operations, monitors and controls the computer by operating the central console. This person is usually competent to work at a high level of all computer operation phases. He/she also studies program operating instruction sheets to determine equipment set-up and run operation and confers with technical personnel in the event errors require change in instruction or sequence of operations.

The junior programmer usually is fairly competent to work on several phases of programming with only general direction but still needs some instruction and guidance for the other phases. He/she codes program instructions, assists in preparing test data, testing, and debugging programs.

A junior computer operator assists higher level classifications in monitoring and controlling the computer. This person is usually fairly competent to work on several phases of computer operations but still needs some instruction and guidance for the other phases.

The manager of unit record equipment, under supervision of a data processing manager, directs the personnel of the unit record department and manages the preparation of various reports and data. In non-computer installations he/she may be considered manager of data processing with similar responsibility.

A keypunch supervisor, under supervision of the data processing or unit record manager, plans, schedules, supervises, and directs key punching and verifying activities. Also this person maintains the corresponding files, supervises assigned personnel to carry out the above activities, and trains new employees.

A junior keypunch/tape operator, under direct supervision, operates keypunch, tape, and verifier machines, works on procedures used to perform routine assignments; performs related clerical duties.

The communications equipment operator is responsible for the operation of data transmission devices.

Duty A Preparing Data Entry Information

- 1 Operate keypunch
- 2 Operate sorter
- 3 Operate verifier
- 4 Operate reproducer
- 5 Operate interpreter
- 6 Operate collator
- 7 Operate calculator
- 8 Operate accounting machine
- 9 Operate input/output unit for punched paper tape

(TASK STATEMENT) OPERATE KEYPUNCH

TOOLS, EQUIPMENT, MATERIALS,
OBJECTS ACTED UPON

Keypunch [with or without printer]
Blank cards, correct size and color
for particular assignment
Card saw-clear jams [prying knife]
Connection tape
New ribbon in case during the day or
work assignment the ribbon needs
changing
Layout sheets
Sand paper file
Machine reference manual
IBM
Keypunch 024, 026, 029, 129 or
Univac equipment

PERFORMANCE KNOWLEDGE

Load cards; check accuracy of punches
with card gauge
Analyze data to be keypunched and set
beside machine
Read card layout
Make a program card or put program
into machine
Test program card or program
Check space allocation [card design
for data given]
Determine special codes to be used
Determine special instructions from
programmer
Keypunch; make corrections; make new
cards
Duplicate damaged cards
File and remove cards from master file
Receive proofread printouts and correct
errors
Route work to next station-verify
Clean machines

SAFETY - HAZARD

Pin back long hair to keep it out
of machine
Unplug machine before any simple
maintenance such as replacing
starwheel
All chips in the chip box must be
carefully disposed into trash
containers; if used as confetti
they can cut a person's eye
Electrical shock-frequent inspection
of cord plugs that may be damaged
Card edges may cut fingers by
improper handling

DECISIONS

Determine use of program card/
alternate programming/memory

Determine the correct position for
all automotive levers

CUES

Automatic shipping and duplicating
not being performed

ERRORS

Programmed card not fasten correctly
to drum
Source data and cards out of order
Damage cards form moisture or folds
Lift starwheels before removing drum
damages printing unit
Do not delete multiple program
punches in printing keypunch, this
can damage printer
Only use ballpoint pen when writing on
card-a pencil or pencil indentation
could damage card

TASK STATEMENT) OPERATE KEYPUNCH

SCIENCE		MATH — NUMBER SYSTEMS	
<p>Apply workings of photocells and photodiode to computers</p> <p>Apply the basic electrical current to completing a circuit</p> <p>Simple machines used to gain mechanical advantage [card saw as simple lever]; work input/output, friction and efficiency in simple machines [friction on card transport mechanism]</p> <p>Resistance of materials to change in shape [excessive force damages transport mechanism; avoid excessive sanding of card transport wheels; relationship of force to distortion in an elastic body [excessive force can shear or bend cards]</p> <p>Professionalism: Maintain capacity to foster cooperation, to function efficiently when encountering fast changing, multiple, personal or situation variables; exhibit qualities of self-confidence, self-control, self-respect, self-reliance and adaptability</p> <p>Attributes of maximum functioning capacity: Conscious awareness of the need for a balance between tension and relaxation; conscious awareness of physical expressions basic to peak physical performance; conscious awareness of qualities basic to optimal mental performance</p>	<p>Use binary numbers on reading card for 80, 96, 120 column card</p> <p>Hindu-Arabic numeral system</p> <p>Number/numeral</p> <p>Place value/expanded notation</p> <p>Compare and contrast various base number systems with the decimal numeral system (binary, octa etc.)</p> <p>Positive rationals</p> <p>Use of numbers (without calculation)</p> <p>Counting</p> <p>Coding [Hollerith's code, basic math symbol]</p> <p>Ratio</p> <p>Fundamental operations (calculation)</p> <p>Addition, subtraction, multiplication and division algorithms; order of operations, i.e., use of parentheses in simplifying arithmetic expressions</p>

Duty B Operating Computer

- 1 Operate console
- 2 Load programs and data cards
- 3 Maintain equipment
- 4 Prepare back-up data for storage
- 5 Supervise storage of back-up data
- 6 Operate magnetic tape units
- 7 Maintain cards files
- 8 Initiate emergency test procedure
- 9 Operate card reader
- 10 Operate card punch
- 11 Operate line printer
- 12 Operate optical I/O devices
- 13 Load and operate disk drives or cartridges
- 14 Operate teletypewriter terminals
- 15 Operate on line systems
- 16 Update manuals

(TASK STATEMENT) OPERATE CONSOLE

SCIENCE		MATH — NUMBER SYSTEMS	
BEHAVIORAL SCIENCE		Compare; contrast various constructed base systems with decimal numerals (binary numbers) Hindu-Arabic numeral system: Number/numeral, place value/expanded notation, compare and contrast various base number systems with our decimal numeral system Use of numbers (without calculation): counting, coordinate system, ordering, indexing, coding, ratio, measurement, recording; addition, subtraction, multiplication and division algorithms; order of operations, i.e., use of parentheses in simplifying arithmetic expressions Read and interpret tables, charts and graphs [logs] Reduction of fractions; changing mixed numbers to improper fractions; changing percents to fractions and fractions to percents; finding a percent of a number and what percent one number is of another; changing fractions to decimal and decimals to fractions; Ratio and proportion; estimation	
Maintain capacity to foster cooperation, and to function efficiently when encountering fast changing, multiple, personal or situational variable Attributes of maximum functioning capacity Conscious awareness of the need for a balance (both physical and mental) between tension and relaxation. Relates to: comfort, caution, safety, and physical, emotional, and intellectual health Conscious awareness of physical expressions basic to peak physical performance: body rhythm, breathing coordinated with body movement; body balance and posture, movement from tension to relaxation and vice versa Conscious awareness of qualities basic to optimal mental performance: attention, observation, concentration, mental alertness, mental quietude, mental clarity, organization
